---

Gary: EPA Clu-In has a dioxin treatment technologies website that talks about "promising dechlorination methods for dioxin destruction are in varying stages of development: KPEG4, APEG-PLUS, base-catalyzed decomposition, etc...." and also "bioremediation is regarded as an attractive possibility for cleaning up dioxin-contaminated soil, but... etc." I didn't see these specifically named in the draft remedial alternatives memo, but you may want the PRPs to investigate some or all of them during the FS. Here is the website: [http://www.clu-in.org/contaminantfocus/default.focus/sec/Dioxins/cat/Treatment\\_Technologies](http://www.clu-in.org/contaminantfocus/default.focus/sec/Dioxins/cat/Treatment_Technologies)

Phil: Any opinions on the different surface weighted average concentrations for the preliminary remedial alternatives (presented in Section 5.2 and Tables 5-4, 5-5)?

Thanks,

Stephen L. Tzhone

Subject: San Jacinto Document Review Log

---

Folks,

A table showing the San Jacinto documents being reviewed now, as well as the next few expected deliverables, is attached. For those who are still reviewing the documents, I would appreciate your comments as soon as possible. The schedule for the site, and remaining future deliverables, is being worked out now, so I expect to send everyone the updated schedule for the site when that is available, perhaps in several weeks.
